

Bell 407

CABIN HEATER / WINDSHIELD DEFROSTER High Performance Heating System

ACC's capabilities include design, manufacture and support for civil and military rotorcraft and fixed-wing air management systems, development of custom air management solutions for avionics and electronics cooling systems, fluid systems, pneumatic and electric environmental controls, blowers, valves and ducts. ACC also specializes in electro/mechanical air management system and component design, development, certification and FAA program management. The company is ISO9000/AS-9100 certified.

Capabilities

- Air outlets located at floor level
- Low noise level
- Exceptional output
- Arctic heater option; field-proven to -35° F
- Warm air directly on windshield for effective defrosting
- Lightweight, maintenance-free mini-ejector system (no blowers or moving parts)
- Automatic bleed line drain valve
- **Option:** Chin Bubble Defroster
- **Option:** Arctic heater (70% greater capacity)
- **Option:** Cabin exhaust ventilation system maintains fresh air-flow in cabin, enhances side window defogging
